

How to read the stock tables

• Bold faced stocks closed at least 5% higher or lower than the previous close.
• Underlined stocks traded 500% or more above their 13-week average daily volume.

Notes: a = annual or quarterly reports are available.
n = in U.S. dollars (on Canadian exchanges).
c = in Canadian dollars (on U.S. exchanges).

Readers are provided with a simple guide to the Stock Trends indicators which allows them to quickly assess current price movements in a longer-term trend context...

THIS WEEK'S DATA

Table with columns: high/low, low/ask, close, chg, vol (h), yld, Share profit, p/e ratio. Contains market summary data.

Stock trends: a guide to the indicators

The indicators represent one possible way to look at stock market investing. They are based on trading patterns rather than fundamental values of enterprises.

Bullish trend: The stock's 13-week moving average is above its 40-week moving average and the short-term price trend is strong.
Weak bullish trend: The stock's 13-week moving average is above its 40-week moving average but the short-term price trend is weakening.

Relative Strength: compares a stock's performance to that of the S&P/TSX composite index over the last 13 weeks.
Values over 100 indicate the stock is underperforming the index.

Annual Reports Service

FREE ANNUAL REPORTS and if available, quarterly reports, for companies with the A symbol. Reports mailed next business day, subject to availability.
